(54) Title: A MAILING PACKAGE

(57) Abstract: A package (1) has a container part (3) which defines a cavity (41) having an opening for receiving a product, a closure part (5) which is movable from a first closed position, in which it closes the opening to the cavity, to an open position in which it opens the opening to the cavity, and an outer surface (7) having an address (27) thereon which is covered by the closure part in the first closed position thereof. The closure part has a first configuration in the first closed position and is adapted to be moved from the first configuration to a second configuration in which it is able to adopt a second closed position in which it closes the opening to the cavity, but leaves the address uncovered.
